

Justice and Public Safety

Technology to improve public safety

Trinity Technology Group, Inc.

Trinity Technology Group (TrinityTG) is a Sacramento-based Information Technology consulting company. Established with a commitment to adeptly apply technology solutions so that government can better service its constituents, we deliver end-to-end solutions that solve real business problems for **Justice and Public Safety, Health & Human Services, Natural Resources & Energy, and Government Operations**.

Our Justice and Public Safety Team

Our Justice and Public Safety (JPS) Team is a dedicated group of professionals providing thought leadership and smart technology solutions that improve public safety.

WHO WE SERVE: We align our technology to address the unique needs of organizations in the law enforcement, corrections, emergency management, and justice communities.

HOW WE SERVE: We assemble a focused team of Subject Matter Experts, Solution Architects, and Consultants to work side-by-side with our clients to create solutions that solve complex problems.

WHAT WE HAVE DONE: We have integrated Offender Management Systems and Health Care systems (including for one of the largest Correctional Organizations in the world). Our BI and Data Warehouse solutions have provided real-time analytics for justice organizations to make critical decisions quickly.

What We Do and Why We Do It

MANAGEMENT CONSULTING: Our Management Consulting practice is grounded in years of correctional experience. Our team is composed of experts that mentor and guide both executive and middle management teams on best practices and “real world” implications that help remedy client losses, tackle security-side concerns, and help avoid costly organization pain points before they emerge.

OUR SOLUTIONS

Since 1999 we have implemented numerous, total solutions for our customers, including:

- end-to-end system integration,
- custom software solutions and products,
- business process analysis,
- business intelligence and data analytics,
- enterprise technical architecture planning services,
- and maintenance and operations support.

BUSINESS PROCESS & POLICY IMPROVEMENTS: Our knowledge of correctional facilities and the forces that shape their operations is deep. As we take inventory of the technology available – technology marked by its elasticity and fluidity – we notice that some practices and procedures of the past are not only sluggish, they are endangering. We are available to serve as your partner and to demonstrate how critical it is that correctional processes stay in step with technology.

SYSTEM INTEGRATION/INTERFACES: Modern technology, and the powerful solutions we can create with it, better protects correctional and health employees and the patient/inmates they serve. We've seen the fallout from a current correctional challenge – siloed inmate custody and health care system lessens their longevity and usability. With our interface solutions, we bring disparate data sets together to make a dynamic combination that improves physical and data security for all, while reducing costs and improving accuracy. Our solutions bolster the whole health care and custody data system through integration.

ANALYTICS AND DATA WAREHOUSE: We offer analytics and data warehouse solutions that span the full implementation lifecycle to help you use your data wisely from inmate intake to release. We develop solutions that ensure your legacy data lives on and is ready to capture incoming data – all to help your organization predict outcomes, anticipate trends, and demonstrate effectiveness.

FRAUD AND FRAUD DETECTION: We have proven solutions that help our clients identify potential instances of fraud and/or abuse, which will be analyzed by client investigators, auditors, analysts and legal staff.

67 years of
correctional
experience.

Potential instances identified are provided in reports including but not be limited to: findings, leads, fraud indicators, aberrant billing patterns.

MANAGED SERVICES: Our managed services help corrections proactively outsource management responsibilities and functions. Our managed services will allow organizations to increase efficiency, accuracy, and reliability – all while cutting expenses. We help streamline processes and conserve resources so your employees can focus on growing your business.

Trinity Technology Group

Trinity Technology Group has been building working IT solutions that solve real business problems for nearly 20 years in Sacramento. Our team of talented professionals – from business analysts to seasoned developers, quality assurance analysts to project managers – work hand-in-hand with you to create formal plans for each critical process and to deliver the solution your department needs.
